Executive Summary

This report presents the results of the Chariton County needs assessment survey conducted by Care Connection for Aging Services. Care Connection is an Area Agency on Aging serving 13 counties in west-central Missouri with Chariton County in the service area. The survey was conducted from late October through November 2017 with nearly 3100 surveys mailed with a postage paid return envelope to all mailing addresses and post office boxes throughout the county. The returned surveys included a sample of 279 or 9 percent, of respondents with varying ages in the county.

This survey pointed out the highest need of Chariton County residents is available medical and dental care. This was rated as “some problem” by 34 percent of all the survey respondents. In addition to being rated as one of the top “serious problems”, paying for medication was also perceived as a problem (“some problem” with “serious problem”) by 44 percent of those surveyed in the county. Respondents were asked to state which two problems concerned them the most. The problems that were consistently mentioned throughout all zip codes were the need to available medical and dental care, paying for medication, telemarketing or in-home sales and paying for assistive devices (glasses, hearing aids, canes, etc.).

The number one “serious problem” noted was telemarketing or in-home sales. This was rated at 16.8 percent. Most comments stated that regardless of being on the “No Call” list they still receive calls at all hours of the day. These calls are annoying, persistent, a huge intrusion, intimidating and the caller just won’t take “No” for an answer. In rushing to answer the phone falling then becomes a concern along with calls coming in on cell phones.

The second most important need identified by the residents of Chariton County is paying for assistive devices (hearing aids, glasses, canes, etc.). This was rated a “serious problem” by 15 percent of all survey respondents. Under “some problem” this concern drew 25 percent. Most comments mentioned fixed income with no extra money for glasses or hearing aids. The cost of hearing aids and that Medicare or Medicaid does not cover towards the cost.

The third need identified as a “serious problem” by the residents of Chariton County was employment opportunities. This was rated at 14.3 percent and 16.5 percent as “some problem”. Higher paying jobs, better employment opportunities, not hiring disabled individuals, traveling out of the county (30+ miles) to better jobs creates wear and tear on vehicle, part time employment for older people are some of the comments by the respondents throughout the county.

Care Connection for Aging Services Chariton County Needs Assessment Survey Results, 2017

Paying for medication is the fourth need identified as a “serious problem” at 13.9 percent. This was also a high need identified under “some problems” at 30 percent. The costs of medications for certain illnesses are very expensive and are not covered by Medicare or Medicaid (adult ADHD, Parkinson’s). “Medicine that must be taken to remain healthy is not covered” are just some of the comments made by the respondents.

The fifth need identified as a “serious problem” is getting information about services. This concern drew 12.9 percent. Under “some problems” this need was the second highest concern at 30.8 percent. Although this has appeared to be a high need there were very few comments made on what type of information people need and what type of services they are seeking. Getting information about my illness, or health insurance had significant responses under both “some problems and serious problems”.

With the top five “serious problem” needs identified: telemarketers or in-home sales, paying for assistive devices, employment opportunities, paying for medication, and getting information about services the top needs under “some problems” will be identified.

Available medical and dental care respondents reported 34 percent under “some problems”. As stated previously this was the highest need reported throughout the county. Many comments focused on the lack of specialist in the county and those that accept Medicaid or other insurance. There is little to no medical/dental resources available to choose from. No Medicaid dentist available and dentists with sliding fee scale has a waitlist. Dental care is vital to overall health. Travel out of the county for medical appointments and hospitals leads to transportation issues. There is concern about the closings of local clinics, where will people go. People worry about the time it takes for an available ambulance service to arrive which can be critical.

Other important concerns determined as serious include depression/loneliness/loss of loved one at 39.8 percent as a problem (“some problem” with “serious problem”) among all respondents. Maintaining and repairing home and yard was identified under “some problem” at 29.3 percent with getting information about health insurance and income each at 27.2 percent.

Issues that were least regarded as problems in Chariton County raising grandchildren; emotional, physical, and/or financial abuse/exploitation; personal safety (crime); concern/lack of knowledge after being in hospital; bereavement/grief/hospice services; and maintaining personal independence.

Care Connection for Aging Services Chariton County Needs Assessment Survey Results, 2017

The survey also revealed the most common sources of help the respondents would use was neighbor/family/friend at 64.5 percent, doctor/nurse at 40.8 percent, and computer at 29.7 percent. Of interest is that Salisbury respondents had the highest percentage that used the computer for help at 38.7 percent. The most popular sources of transportation include respondents' own vehicles at 88.8 percent, friends/family/neighbors at 19 percent, and no transportation at 5 percent. In the survey section where the respondents could state other issues/concerns not listed that are important and under the section where the respondents could put their comments, most of the responses expanded on the problems they were having with the issues already listed on the first page of the survey. Most of the responses expressed many difficulties and some were anticipatory of problems that may happen in their future because of aging. All the responses are listed by each zip code represented.

Introduction

Care Connection for Aging Services applied for funding through the Chariton County Senior Citizens Tax Fund to conduct a needs assessment of the county. The needs assessment was conducted in late October through November of 2017 with 279 residents responding. (See Table I for distribution of sample). This survey is a needs assessment to determine the most important concerns that older adults have in their daily lives.

Approximately 3100 surveys were mailed to all addresses and post office boxes in Chariton County and a postage paid envelope was provided to insure surveys were returned. The survey results were calculated and assembled by Marilyn Gunter, MSW, Director of Care Management for Care Connection for Aging Services. This report begins with the total of the results from all the 279 respondents and is categorized by zip code based on the surveys returned. Each zip code is presented along with a qualitative section. The survey instrument is located at the end of this report.

Qualitative Results

1. From the survey: “Please state which two from above (the issues) that most concern you and why?”

Most comments centered on the lack of income to cover medical expenses, utilities, or basic needs; paying for assistive devices; telemarketing calls; and medical or dental availability. One respondent stated “the rising cost of basic needs is outrageous in our small communities. We need more employment in small communities instead of driving 30 miles to larger employers (Walmart).” Another stated that “my income meets my basic needs as of now but not much left over for clothes or maintain or upkeep my home or buy or fix my old furnace.” Another commented on the “cost of insurance” and the Many respondents mentioned the need for new glasses or an electric chair.

Transportation #8 respondents commented on the distance to travel for medical, the inability to either get in a vehicle or the availability of one therefore cannot go see a doctor.

Maintaining and repairing home and yard #10 lots of comments regarding home maintenance.

2. From the survey: “Please state other issues/concerns not listed that are important to you.”

Some of the statements made: “Retirement not increasing to keep up with the rising cost of insurances and cost of living.” “Transportation to doctors and shopping.” “How to afford health care.” “Inflation, the cost of living is rising too fast.” “Affordable mental health being far from better hospitals.” “Blighted structures in town harboring unwanted animals and reptiles and dangerous to children.”

3. From the survey under: “Comments”

One person commented, “Thanks for taking the time to find out about seniors and how to help them.” Another stated, “My electric bill is my biggest debt for help.” Other comments were, “Main concern is transportation to doctor.” “Small communities mean taxes raise, less employment, higher groceries. Need employment opportunities to offset cost of living.” “If not for HUD for my rent I would be homeless.” “I’m struggling right now but I know that I won’t be able to stay home very much longer.”

Qualitative Results

- 1. From the survey: “Please state which two from above (the issues) that most concern you and why?”**

One respondent indicated #10 living in a rural area it’s hard to find temporary help with small jobs. Would help if there was a group of workers, just for handy-man services and they’d pass a check on personal reliability and honesty, also cleaning services you can trust.

Another respondent mentioned I am well cared for by self and family.

- 2. From the survey: “Please state other issues/concerns not listed that are important to you.”**

Only one additional concern was mentioned at it was “we can’t even afford burial benefits, insurance.”

- 3. From the survey under: “Comments”**

Comments made were “my wife and I are now just becoming seniors so we don’t know where to get help. Also “Reliable cleaning services. Handyman.

Qualitative Results

1. From the survey: “Please state which two from above (the issues) that most concern you and why?”

Several respondents mentioned concerns about home and yard maintenance due to health issues and the inability to do things themselves or lack of financial means to hire work done.

Income was frequently mentioned as a concern. One respondent stated “income, having enough money for the entire month.” Another respondent said, “I run out of money each month, sometimes can’t afford medication refills and they have to wait.” This leads to #14 (cost of housing/rent/mortgage), #21 (paying for utilities) and #2 (paying for medication) concerns. One respondent said, “After paying my mortgage there is not enough money to pay all the utilities. I’ve had to “close” my house down for the winter. It’s really bad not being able to live in my own home. PLEASE HELP!” “I worry each month if I will be able to pay medicine bills.”

Available medical and dental care was mentioned as a concern. Another concern is the distance to drive to see specialists or medical appointments and the increase of medical and dental expenses. Also a waiting list for dental care and availability of dental care locally are a concern.

#19 Telemarketing is a huge problem. One respondent commented that “the telephone calls wanting to sell you something. Your cell phone is also used. This causes #15 (emotional, physical, and or financial abuse) and rushing to the phone and its some “nut” trying to get money. This gets on my nerves and ruins a nice day”.

Employment was mentioned as a concern. A comment made, “need more available jobs for all ages. People cannot live here without a decent income.”

2. From the survey: “Please state other issues/concerns not listed that are important to you.”

There is great concern about no grocery store in Keytesville, especially for those who cannot drive to the larger communities. Casey’s is too expensive and doesn’t carry many groceries.

Another concern mentioned was no ambulance base in Keytesville.

“Everything is getting higher and SS is low.”

3. From the survey under: “Comments”

One respondent commented, “I am disabled and I have great difficulty supporting myself on the benefit amount. I find that it’s hard to get part time employment with the restrictions placed by Social Security.”

Care Connection for Aging Services Chariton County Needs Assessment Survey Results, 2017

Another comment “These things do not affect me yet. I am sure in the future they may.”

“Care Connection has been very helpful in connecting me with services.” “Thankful for services to assist the aging!”

Qualitative Results

- From the survey: “Please state which two from above (the issues) that most concern you and why?”**

The most common concerns mentioned are medical/dental/emergency care and telemarketing. Having enough income to pay for medication and transportation to and from medical appointments was another concern.

Interestingly caregiving and socialization were two areas of concern that were mentioned more than once. Insurance – medical, prescription, and home owners was also mentioned as a concern.

2. **From the survey: “Please state other issues/concerns not listed that are important to you.”**

One issue mentioned was, “the smaller communities do not have services that people living in town take for granted.” Another comment, “I have a job and I have to take time off to take husband back and forth to Columbia – therefore less income to pay bills.” Vision, dental care for senior citizens is a concern.

3. **From the survey under: “Comments”**

“I love living in Mendon, MO but am concerned about medical assistance in time if something flares up.”

A couple of comments mentioned relying on family or friends but neither live close by. Other comments were directed towards the government and negative.

New Cambra, Chariton County

Respondents = 1

No “serious problems” were identified. Telemarketing or in home sales #19 was the only item marked under “some problem”.

Demographic information: One male, aged 70-79, married, no race/ethnic origin identified.

Sources of transportation: Own vehicle

Who do you go to for help/needs? Church, Doctor/Nurse, Neighbor/Family/Friend, and Computer.

No comments or additional concerns were noted.

Rothville, Chariton County

Respondents = 4

Top concerns under “serious problems” are paying for assistive devices, telemarketing, getting information about health insurance, and depression/loneliness/loss of loved one.

Top concerns under “some problems” are getting information about services, getting information about my illness, obtaining information on selecting nursing homes or assisted livings, and understanding medical bills and medical claims.

Qualitative Results

- 1. From the survey: “Please state which two from above (the issues) that most concern you and why?”**
#15 “Emotional, physical, and/or financial abuse/exploitation is way too common in our area. #6 Depression/loneliness/loss of loved one is also too common. People just don’t understand the illness and don’t know how to reach out. Understanding about health insurance.”
- 2. From the survey: “Please state other issues/concerns not listed that are important to you.”**
“People in our area lack the knowledge needed to give the independence needed to help with things like emotional support, who to turn to, women's shelter's etc.”
- 3. From the survey under: “Comments”**
“Resources are available people just don't know how to find them.”

Qualitative Results

1. **From the survey: “Please state which two from above (the issues) that most concern you and why?”**

Several responses mentioned employment and available medical/dental care. One respondent stated, “worry about access to doctors and dentists in small towns in future.” Another respondent mentioned, “availability of good doctors in town.” Another comment was, “good dentist hard to come by.” “Work wages need to go up to \$9 hour starting!” More than once it was mentioned good employment opportunities.

2. **From the survey: “Please state other issues/concerns not listed that are important to you.”**

A comment mentioned was, “rural/small towns are fairly isolated from specialty medicine. Cost of transportation to facilities or doctors for mental health, podiatry, diabetes counseling, etc. is expensive as they are very often more than 60 miles away.” “The cost of living expenses rising force me to cut back on less essential goods and services.” “I don’t know anyone in this town to only say hi. I have no family to help me.” “Law enforcement and emergency responders need to be better trained when dealing with those with mental illness.” “Being able to get around stores and businesses, doors are too heavy to open and isles need to be open and not blocked, barely get cart through isles. Some have ramps but too steep and have bumps to go over.”

3. **From the survey under: “Comments”**

One respondent stated, “We are young enough not to have major problems. Looking at our own hospital/doctor bills and related insurance I can understand why these would be very confusing for older people.”

Another comment, “transportation is the biggest problem I have as I have to travel to Columbia to the VA hospital.”

“I did not say how lonely I get, but thankfully the senior center takes care of that with activities during the day and two nights a week. I just wish there were more evenings to socialize.” Many comments mentioned not qualifying for energy assistance or food stamps.

Qualitative Results

- From the survey: “Please state which two from above (the issues) that most concern you and why?”**

Medical/Dental care had prevalent concerns mentioned. One respondent stated, “for me personally, the two things on the above list that concern me the most is how Medicaid will Not cover adult dental (except pregnant women) and will NOT cover adult ADHD meds. Dental care is vital to overall health and is expensive without insurance. ADHD cost \$85.00 - \$100.00 per month and aren’t covered by adult Medicaid and are needed for good mental health for some.”

Another stated, “Marginal medical care.”

Another respondent stated, “Chariton County has very little resources available for medical/dental and any legal resources which causes added travel and expense for those services.”

Care Connection for Aging Services Chariton County Needs Assessment Survey Results, 2017

Another concern was #13 and #19. “There is a flood of into from insurance companies but little from state or federal on what is required and needed. Telemarketers are simply a product of todays over communication. No answers except turning off.”

And lastly mentioned is a concern about the lack of locally available fresh produce.

2. From the survey: “Please state other issues/concerns not listed that are important to you.”

Affordable day care, employment and transportation were additional concerns mentioned. Comments made were, “I think the list covered all areas fairly well. Some things I would like to see in the Mendon, Triplet, and Brunswick area is safe, affordable day care. There is a need for decent paying jobs that don’t require someone having to commute 30+ miles one way. Gas and wear and tear on vehicles doesn’t make it beneficial for people to travel for employment.”

Another comment stated, “I can see in the future having to depend on OATS and I am not certain that will be there when I need it. Funding seems to be getting slimmer.”

3. From the survey under: “Comments”

One respondent stated, “I am very fortunate that my family and I have an awesome support system through church family, family, friends, and neighbors. We have great medical (GRMC) and vision care (Premier Eye Care). I am fully capable of researching any other things we may need.”

Another respondent stated, “Getting harder and harder to maintain my home. List of people willing to do handyman chores cheaply would be nice.”

And unfortunately, “I do not believe Care Connection is the answer to any of the listed problems.”

Qualitative Results

- From the survey: “Please state which two from above (the issues) that most concern you and why?”**

Medical and dental care was concerns mentioned. One respondent commented, “Not having dental care through Medicare.” Another stated, “The price for dental care.” And another commented, “hospital ER care in Moberly area is VERY lacking and doctors in that area are lacking in education or don’t care.”

Home safety specifically grab bars was mentioned a couple of times. Paying for assistive devices, hearing aids and glasses were a concern.

Telemarketer's frequent calling despite being on the no call list was mentioned. Maintaining home and yard received additional comments. Income and not being able to receive assistance and pay for food were additional comments.

2. From the survey: "Please state other issues/concerns not listed that are important to you."

One respondent stated, "Living out in the country and ambulance not getting here soon enough."

Another concern noted was, "Paying medical bills."

"Difficulty in getting people to do home repairs, very slow to respond in this remote location."

"How to pay for death expenses without it being put on the child to take care of."

3. From the survey under: "Comments"

The only comment noted was to do without health and dental care.
